

ABHISHEK MANIKANDAN

Business Analyst | Requirements, Integration and Data Analysis | Agile Digital Delivery

Glasgow | +44 7799 258863 | abhimaniknair@gmail.com | [LinkedIn](#) | [Portfolio: abhishek-manikandan.vercel.app](#)

Right to work: eligible for the UK Graduate visa on completing the MSc, with no sponsorship required.

PROFILE

Business analyst with delivery experience in regulated financial services and consumer digital products, most recently in Agile, multidisciplinary product teams, working as the bridge between business stakeholders and engineering teams. Produces the analysis that turns organisational goals into delivered services: requirements, technical specifications, user stories with acceptance criteria, data mappings, options appraisals and benefits analysis. Led business and technical analysis on a cloud-hosted debt recovery platform used by 10 institutional lenders, including API integration requirements and a SQL data model that gave compliance near real-time monitoring. MSc in Business Analysis and Consulting from the University of Strathclyde, with public sector engagements for a Scottish local authority, a regional police force and NHS England. User-centred and evidence-led, with an engineering degree in electronics and communication.

KEY SKILLS

- **Needs and requirements:** Elicitation and validation workshops, problem statements, business and functional requirements, epics, user stories, backlog prioritisation
- **Digital and data systems analysis:** API integration requirements, data mapping and transformation specifications, SQL, entity relationship data modelling, functional and technical specifications
- **Business modelling and process improvement:** Current and future state process mapping, bottleneck and root cause analysis (5 Whys, fishbone), Lean Six Sigma, McKinsey 7S, CATWOE, RACI
- **Options, benefits and change:** Problem definition, options appraisal, multi-criteria decision analysis, benefits and impact analysis, KPIs and key risk indicators, phased roadmaps, business readiness
- **Stakeholder relationship management:** Stakeholder mapping, requirement workshops, influencing prioritisation and trade-off decisions across business, senior leadership reporting
- **User insight and testing:** Funnel and cohort analysis, A/B testing, Mixpanel, Metabase dashboards, user acceptance testing coordination
- **Delivery and tools:** Scrum (sprint planning, backlog refinement), Jira, Confluence, Figma, Excel, SQL, Power BI (in progress), Python (foundation); regulated environments with data governance and audit requirements

PROFESSIONAL EXPERIENCE

Associate Product Manager | Prodsmiths

Nov 2023 – Dec 2024

Regulated financial services. Combined business analysis and product ownership for India's first fully digital asset reconstruction (bad-loan recovery) platform, hosted on AWS and used by 10+ institutional lenders. Worked in a Scrum team with engineers over a one-year build.

- Led business and technical analysis across the build, translating compliance and regulatory requirements into business and functional requirements for the legal, financial and valuation due diligence modules.
- Wrote API integration requirements and field-level data mapping and transformation specifications across borrower verification, collateral valuation and lender reporting, reconciling fields that carried different meanings in different workflows.
- Designed the SQL entity relationship data model that replaced Excel reporting in use since 2008, giving compliance near real-time monitoring and data accurate enough for audit.
- Mapped the current portfolio onboarding process against the target digital process, located the bottlenecks and specified the compliance workflow automation that cut onboarding from 14 days to 48 hours.
- Owned the product backlog and delivery roadmap; ran sprint planning and backlog refinement in Jira and Confluence, agreeing priorities with lenders, engineering and leadership to sustain 92% of committed scope across 24 sprints.
- Wrote user stories with Given-When-Then acceptance criteria traced from each regulation to delivered functionality and coordinated user acceptance testing across business and technical teams.
- Ran requirement workshops and configuration walkthroughs with each lender's compliance and operations teams, adapting material for technical and non-technical audiences; supported the onboarding of 2 institutional lenders.

Associate Product Analyst | AppsForBharat (Sri Mandir)

Jul 2022 – Nov 2023

Consumer app with over 10 million users. Joined as a product intern and was promoted to Associate Product Analyst within five months; worked with product, engineering and marketing colleagues.

- Gathered and documented requirements for CRM automation and retention features, turning stakeholder needs into user stories and functional specifications across 15 automated user journeys.
- Built analytics pipelines in Mixpanel and Metabase tracking retention cohorts, lifetime value and funnel drop-offs across more than 5 million events a month, validating the data before analysis.
- Analysed the referral funnel and ran iterative experiments that improved share-to-install conversion by 58%.
- Designed and A/B tested cross-sell pricing bundles that lifted average order value by 23%, scoped and deployed within three weeks; retention work reduced churn by 8%.
- Wrote regular performance reports for leadership and built self-serve Metabase dashboards for product and marketing colleagues.

Earlier Roles | CRM, data and operations

Jun 2017 – Jun 2022

- **Relationship Manager, NoBroker (Oct 2021 – Jun 2022):** used stage-level CRM pipeline data to prioritise leads and forecast conversion against monthly targets.
- **CRM Executive, Kapture CX (Jul – Sep 2021):** requirements, workflow configuration and ticket-data analysis for an enterprise CRM implementation for banking, financial services and telecoms clients; 40% rise in user adoption.
- **Technical Analyst, Firstsource, Sky UK account (Feb 2018 – Jan 2020); Quality Analyst, Amazon (Jun 2017 – Feb 2018):** performance and data reporting, and quality audits of operational processes.

MSC CONSULTING ENGAGEMENTS, UNIVERSITY OF STRATHCLYDE

- **AI workflow optimisation, Scottish local authority (StormID, 2025):** built a six-criteria scoring framework to rank 10 council workflows for AI, mapped AI components to the top two and designed a nine-month phased roadmap starting with a proof of concept. Projected staff time savings of 68% and 57%, releasing 460 staff hours a month.
- **Workforce strategy, regional police force (Deloitte, 2025):** diagnosed staffing shortages across three divisions using 5 Whys, fishbone, McKinsey 7S and RACI; made seven recommendations, including admin automation projected to cut workload by 20–30%.
- **A&E demand forecasting (NHS England, 2026):** built a Random Forest forecast with 96.33% accuracy and used multi-criteria decision analysis to rank six interventions, recommending seasonal resourcing ahead of the October to February peak.
- **Enterprise risk management (WB Alloys Group, 2026):** consolidated 134 risks from 21 branch documents into a single ISO 31000 register for a £25M multi-site manufacturer, with a six-tier escalation protocol and 12 automated key risk indicators.
- **Service model feasibility (STAHL, 2025):** discounted cash flow model across three fleet scenarios, CATWOE stakeholder analysis and a five-phase transformation roadmap (9.8% projected IRR).

EDUCATION

MSc Business Analysis and Consulting

2025 – 2026

University of Strathclyde, Glasgow

- **Dissertation, client report on town-level underperformance in Scotland:** joined seven public datasets (Scottish Government SIMD, National Records of Scotland census, ONS business counts) across mismatched geographies to screen all 508 Scottish towns, then tested six pre-stated hypotheses for Fraserburgh against 20 matched comparator towns (index construction, regression, clustering).
- Delivered five recommendations, each traced to its evidence, with an implementation plan (owners, 90-day actions, cost bands, success measures), stop-or-proceed gates and a reproducible data toolkit the client can re-run independently.

BEng Electronics and Communication Engineering, First Class

2013 – 2017

Akshaya College of Engineering and Technology, Coimbatore, India

CERTIFICATIONS AND ADDITIONAL INFORMATION

- AI Fluency, Anthropic Academy (2026); Fundamentals of Python for Data Analytics, Intellipaat (2026); Product Management Career Accelerator, GrowthSchool (2023); Azure Fundamentals, Microsoft (In-Progress); Microsoft Power BI (in progress)
- Welfare Officer, University of Strathclyde student society (2025 – 2026)
